

Board Members,

There is not enough new business to warrant having a Board meeting this Thursday.

The collection and treatment systems are functioning well. Our lab data continues to be excellent. The outflow water is almost as clear as tap water.

We are scheduling ProPipe to clean lines in the Monte Verde subdivision, Poll Drive, Weber Drive, Spruce Circle, and Sierra Drive. In addition, we will have ProPipe video sections of Weber Drive, Spruce Circle and Sierra Drive that have not been videoed before. In addition to showing line quality, the videos will provide lateral locations that we will add to our system map.

We reviewed the first draft set of drawings and project manual for the force main replacement project and have returned comments and suggestions to AQUA. We proposed a substantial change to the connection at the Poll Drive manhole.
